SEMESTER II (2023/2024)

GATHERING REQUIREMENTS - TASK ANALYSIS

INTRODUCTION

This project 2 report presents our findings from analyzing three applications to test certain features that will be added to our application implementation which are related to SDG12, responsible consumption and production. The three applications include websites refash.my, ClothingDonations.org and 'Good on You' application.

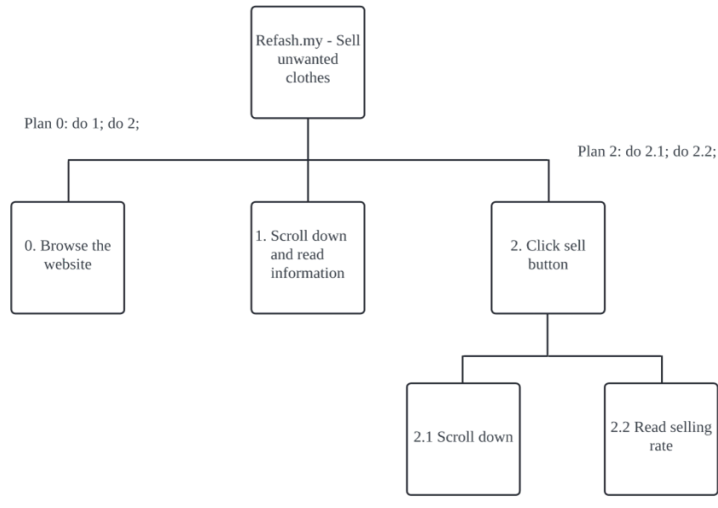

The refash.my website is an e-commerce platform that facilitates the purchasing and selling of used clothing. It promotes the process of finding new homes for old fashion goods and extending their lifespan via allowing users to sell them for sale. Meanwhile, ClothingDonation.org is a website that helps people to locate local donation locations for their gently used clothing. Furthermore, 'Good on You' is an application that offers details on how designers in fashion handle sustainability and ethics. It assists customers in making wise purchasing decisions by rating companies according to how they affect people, environment and animals.

Tasks that we chose from these online platforms are selling unwanted clothes from refash.my, entering zip code to locate nearby donation center from ClothingDonations.org and providing sustainability and ethics information from 'Good on You'.

DERIVATION OF HTA

TASK 1 - Sell unwanted clothes

HTA User 1:

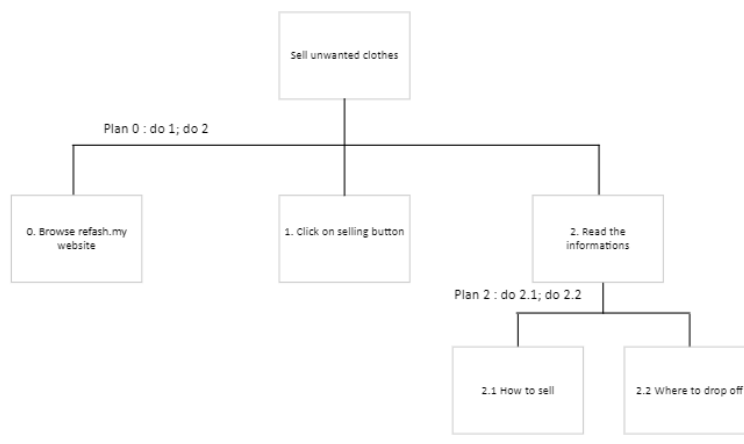

HTA Textual User 1:

- 0. Browse the website
 - 1. Scroll down and read information
 - 2. Click sell button
 - 2.1 Scroll down
 - 2.2 Read selling rate

User 1's video link : <https://youtu.be/Zve0clora1U>

HTA User 2:

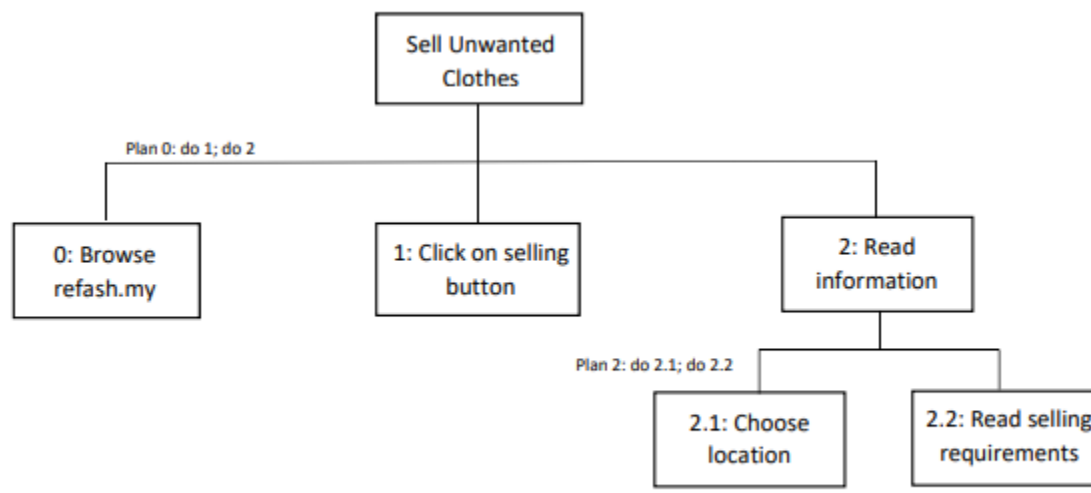

HTA Textual User 2:

0. Browse refash.my website
 1. Click on selling button
 2. Read the informations
 - 2.1 How to sell
 - 2.2 Where to drop off

User 2's video link : <https://youtube.com/shorts/OpbNA-SOXMQ>

HTA User 3:

HTA Textual User 3:

0. Browse refash.my
 1. Click on selling button
 2. Read informations
 - 2.1 Choose location
 - 2.2 Read selling requirements

User 3's video link : https://youtube.com/shorts/cBtNLq_XysY?feature=share

Findings from the HTAs for Task 1 (Sell unwanted clothes)

- All users start by browsing the website and locating the selling button. This underscores the necessity for a prominent and easily accessible sell button on the homepage.
- Each user emphasizes reading specific information related to selling, indicating the importance of clear, comprehensive, and easily accessible content on the sell page.
- User 1 focuses on general browsing before clicking the sell button.

- User 1 has specific interest in the selling rate after navigating to the sell page.
- User 2 focuses on how to sell and drop-off locations.
- User 3 reads information on selecting a drop-off location.
- User 3 focuses on detailed selling requirements.
- Users actively engage with the platform by reading information, selecting options, and completing tasks related to selling items.
- Users exhibit different navigation patterns, including scrolling down to find information and selecting specific options or sections.
- Users need to scroll down to find sell button

Differences of 3 users doing Task 1:

1. Focus Areas:

User 1: Focuses on understanding the selling rates.

User 2: Concentrates on how to sell items and where to drop them off.

User 3: Prioritizes choosing a drop-off location and understanding selling requirements.

2. Information Needs:

User 1: Seeks specific details about selling rates.

User 2: Needs comprehensive information on the selling process and drop-off locations.

User 3: Requires detailed information on choosing a location and meeting selling requirements.

3. Specific Interests:

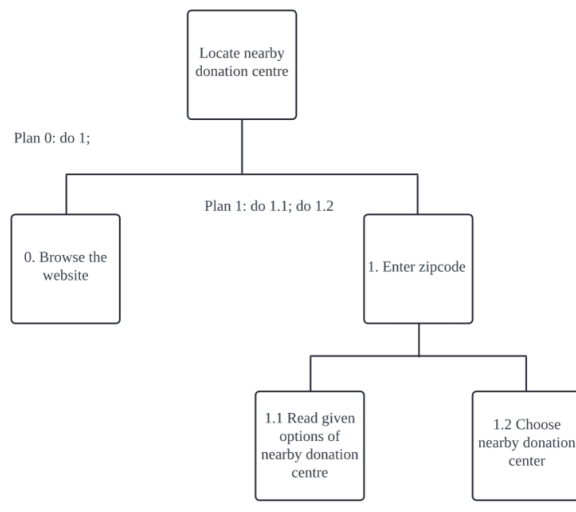

User 1: Interested in the financial aspect (selling rates).

User 2: Interested in the operational aspects (selling process and drop-off locations).

User 3: Interested in the practicalities (location selection and requirements).

TASK 2 - Locate nearby donation centre

HTA User 1

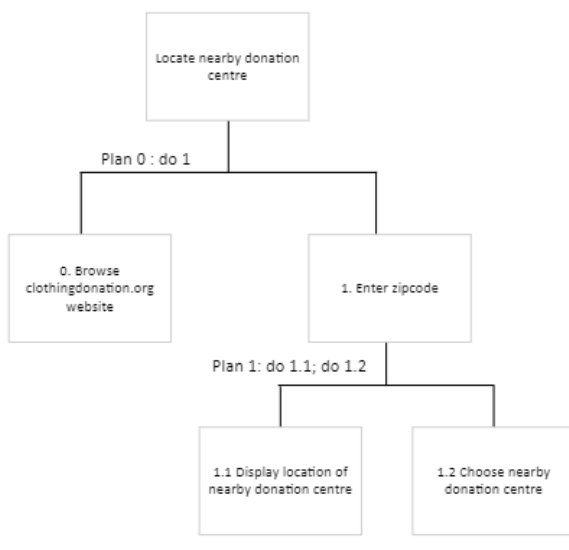

HTA Textual User 1:

- 0. Browse the website
 - 1. Enter zipcode
 - 1.1 Read given options of nearby donation centre
 - 1.2 Choose donation centre

User 1's video link : <https://youtube.com/shorts/DQc0Q9GZj9g?feature=share>

HTA User 2:

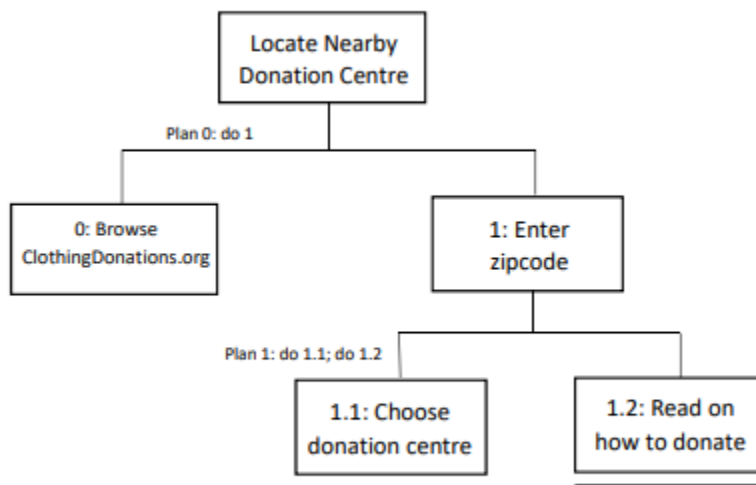

HTA Textual User 2:

0. Browse clothingdonation.org website
1. Enter zipcode
 - 1.1 Display location of nearby donation centre
 - 1.2 Choose nearby donation centre

User 2's video link : <https://youtu.be/GAv50-Msdm4>

HTA User 3:

HTA Textual User 3:

0. Browse clothingdonation.org
1. Enter zipcode
 - 1.1 Choose donation centre
 - 1.2 Read on how to donate

User 3's video link : <https://youtube.com/shorts/O1IVNLfF9rs?feature=share>

Findings from the HTAs for Task 2:

- Users start by browsing the website and entering their zipcode.
- User 1 reads given options of nearby donation centres after entering the zipcode.
- User 2 sees the location of nearby donation centres displayed after entering the zipcode.
- User 3 directly chooses a donation centre and then reads on how to donate.
- All users follow a universal initial step of browsing the website and entering their zipcode.

- Variation exists in how information about donation centres is presented: as a list of options to read or displayed locations.
- User 3's HTA highlights the need for additional guidance on how to donate after selecting a centre.

Differences of 3 users doing Task 2:

1. Focus Areas:

User 1: Emphasizes reading and evaluating options.

User 2: Emphasizes visual and location-based decision-making.

User 3: Emphasizes quick decision-making followed by seeking guidance.

2. Information Needs:

User 1 needs detailed options for comparison.

User 2 needs a visual map displaying donation centre locations.

User 3 needs clear instructions on how to donate after making a choice.

3. Specific Interests:

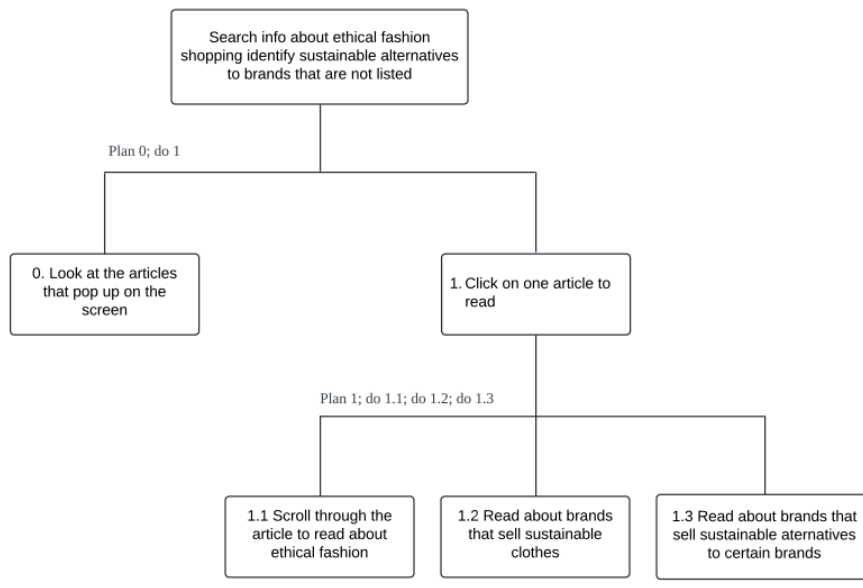

User 1 is interested in detailed information and comparisons.

User 2 is interested in geographical convenience.

User 3 is interested in efficiency and clear guidance post-selection.

TASK 3 - Search about ethical fashion shopping and identify sustainable alternatives to brands that are not listed

HTA User 1:

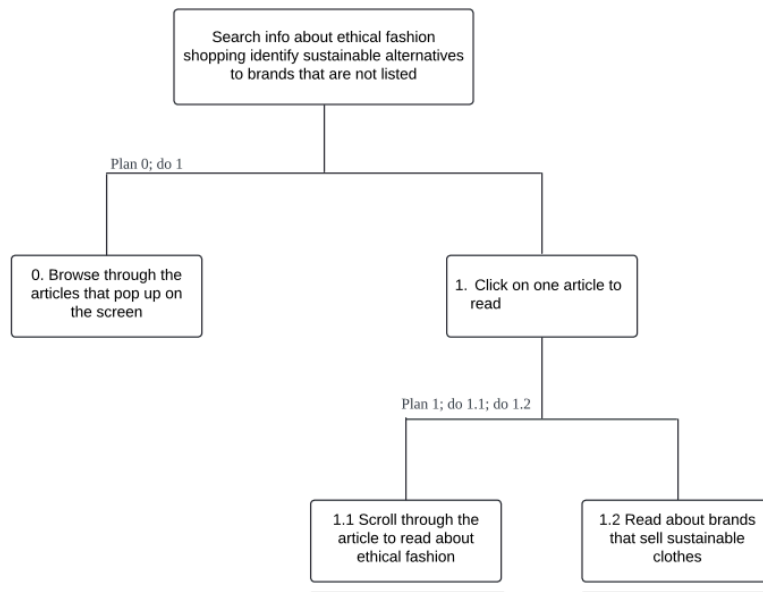

HTA Textual User 1:

- 0. Look at the articles that pop up on the screen
 - 1. Click on one article to read
 - 1.1 Scroll through the article to read about ethical fashion
 - 1.2 Read about brands that sell sustainable clothes
 - 1.3 Read about brands that sell sustainable alternatives to certain brands

User 1's video link : <https://youtu.be/IXDopILwzzc>

HTA User 2:

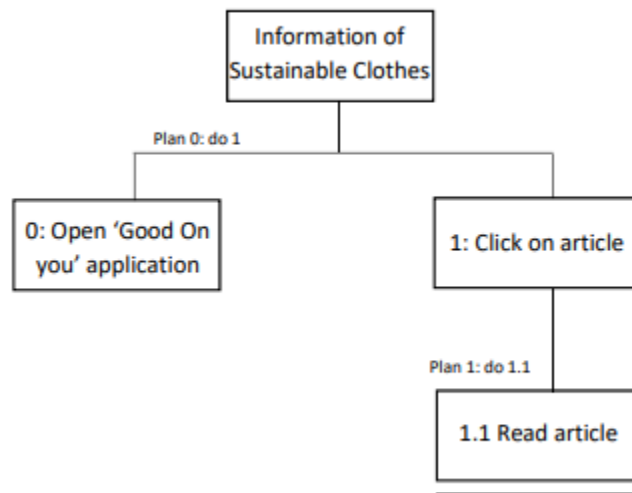

HTA Textual User 2:

- 0. Browse through the articles that pop up on the screen
 - 1. Click on one article to read
 - 1.1 Scroll through the article to read about ethical fashion
 - 1.2 Read about brands that sell sustainable clothes

User 2's video link : <https://youtu.be/NKyWLw3yQCk>

HTA User 3:

HTA Textual User 3:

0. Open 'Good On You' application
1. Click on article
- 1.1 Read article

User 3's video link : <https://youtube.com/shorts/W9uiPnj6Kkw?feature=share>

Findings from the HTAs for Task 3

- Users start by looking at or browsing through articles that pop up on the screen.
- User 1 and User 2 click on an article to read and then scroll through it to read about ethical fashion.
- User 1 reads additional details about brands selling sustainable clothes and sustainable alternatives to certain brands.
- User 2 reads about brands selling sustainable clothes but does not seek additional details on alternative brands.
- User 3 uses the 'Good On You' application, which suggests a different entry point, and focuses on simply reading the article without additional steps.
- All users share a common initial step of engaging with articles about ethical fashion.
- User 1 and User 2 share a similar process but differ in the depth of information sought.
- User 3's process is simpler and more direct, with fewer steps involved.
- Including articles that provide comprehensive information on ethical fashion and sustainable brands can cater to users seeking different levels of detail.
- The simplicity of User 3's HTA highlights the importance of a streamlined user experience for those preferring quick access to information.

- Providing easy navigation and clear information about ethical fashion can enhance user engagement.
- Offering both in-depth articles and concise summaries can address the needs of users with varying preferences for information detail.

Differences of 3 users doing Task 3:

1. Focus Areas:

User 1: Detailed and comprehensive reading on multiple aspects of ethical fashion.

User 2: Overview and understanding of ethical fashion and sustainable brands.

User 3: Quick and straightforward access to information without additional steps.

2. Information Needs:

User 1: In-depth and detailed articles covering various aspects of ethical fashion.

User 2: Clear and concise articles providing an overview of ethical fashion and sustainable brands.

User 3: Simple and easily accessible articles without extensive navigation.

3. Specific Interests:

User 1: Comprehensive exploration of ethical fashion, including brand comparisons and alternatives.

User 2: Identification and understanding of sustainable brands and ethical fashion practices.

User 3: Efficient and quick consumption of information without additional details or steps.

Design Requirement

Based on the information gathered from the HTAs, we can outline the design requirements as follows;

For task 1, it is essential to have a user-friendly interface by ensuring that the sell button is accessible without scrolling. We proposed to enhance the visibility of the existing sell button so that users can easily find the button without scrolling down and without having any difficulty. Additionally, we intend to introduce a personalized selling experience that allows users to set preferences for selling rates, locations and conditions, catering to their specific preferences and needs.

For task 2, the initial step of entering zip code should be retained, as the user did not express any issues with this process in the HTAs. Maintaining this function enables users to find suitable donation centers to donate.

For task 3, we recommend continuing to provide a search button at the top of the website, allowing users to search for articles on ethical fashion and sustainable brands easily. This approach ensures that users can search any desired articles.

GATHERING REQUIREMENTS - USER ANALYSIS

PROPOSED TASKS

As mentioned earlier on in phase 1 of the project, there are multiple issues that needs to be resolved for the better. Firstly, the high consumption of clothes by people, next, difficulty faced by people to dispose of their clothes and last but not least, the difficulty in locating sustainable fashion stores.

Therefore, we came up with an application as our proposed solution, named StyleSafari. StyleSafari allows people to sell their unwanted clothes which results in a reduction in consumption of clothes. This is because the clothes that are sold would be used by someone else later on and not just stored pointlessly in someone's wardrobe. Apart from that, StyleSafari allows people to locate nearby thrift stores to sell their unwanted clothes and also allows people to locate orphanages and old folks' homes so that they can donate their clothes to the needy. Lastly, StyleSafari provides information about ethical and sustainable fashion and also locates nearby stores that sell sustainable clothing. Through this feature, together we can increase the implementation of eco-friendly fashion.

PERSONA

Persona 1

Alex is a 22-year-old student majoring in Bachelor of Chemical Engineering in Gas. His daily routine includes attending classes, studying, and doing sports. With budget-limited, Alex often seeks out affordable yet stylish clothing options that fit his personal style and practical needs. He once mentioned that he seldom buys new clothes in the range of 3 times per year. Alex is motivated by the desire to express his personality and feel confident in his appearance without breaking the bank. He wants to look professional while maintaining a casual yet trendy look for daily campus life.

Alex's primary goal is to build a wardrobe that balances affordability, style, and practicality. But Alex faces the high cost of fashionable and durable clothing that strains his limited finances. He experiences frustration when he cannot afford or feel reluctant to buy trendy items. Despite his financial constraints, Alex gains a keen eye for bargains and quality. He frequently shops at thrift stores, discount retailers, and online sales to find stylish clothing at lower prices.

Persona 2

Amanda, a 23-year-old girl who loves fashion and stays current with the latest trends. She frequently updates her wardrobe using fashion apps and websites like Zara, H&M, and MONKI, and follows fashion influencers on Instagram. She is interested in sustainable and thrift clothes but often finds it hard to get items that meet her taste and quality standards. Amanda wants to stay stylish, express her personality through fashion, and support eco-friendly practices. She also aims to declutter her wardrobe by donating clothes to orphanages and old age homes.

Amanda's goal is to have a versatile and trendy wardrobe that includes sustainable choices. She would use an app that helps her sell old clothes to make space for new ones and highlights sustainable fashion stores with reviews. Her main challenge is finding fashionable and eco-friendly options, and an app that helps with this and clothing donations would be very useful to her.

Persona 3

Diana is a 20-year-old student pursuing a Bachelor of Science in Geoinformatics. She buys new clothing at least once a month, so she regularly updates her wardrobe. Diana especially likes thrift stores since she can get fashionable and reasonably priced outfits there. She also shops for some of her clothes on social media where she spends a lot of time getting inspired by the newest styles.

Though she has a strong passion for fashion, she is interested in expanding her knowledge of sustainable clothing options. Her goal is to discover ethical ways to donate or dispose of her clothing so she can lessen her clothes in her wardrobe. Furthermore, she also considered selling her clothes but sometimes she felt that selling her clothes would be too difficult. This results in an excessive amount of clothing in her wardrobe. Additionally, she loves all of her clothes and finds it hard to decide which ones to let go of.

SCENARIO

Task Scenario 1

Alex is a part of the crew for an event in his university and he wants to attend the occasion with a totally dazzling new look. However, Alex has a budget to follow and can't spend much for his new attire. He is frustrated that he always end up finding clothes that are of poor quality or clothes that do not meet his expectations when he is strict with his budget.

Therefore, Alex wants to view options that fall under his budget and are also of good quality. He doesn't mind buying second hand clothes as long as they are in good condition. He also prefers the website or the application to display the range or the exact amount of the clothes so that he can plan his spendings and not overspend.

Task Scenario 2

Amanda's aesthetics has changed once again trying to keep up with the latest trends and henceforth, she realised she has multiple clothes that do not fit in her new aesthetics anymore. Thus, Amanda wants to donate her clothes to orphanages so that the kids at the orphanages can not only enjoy having new clothes but also having trendy clothes. Now that her aesthetics have changed, she also needs new clothes that fit her new style.

Amanda wants to know the location of orphanages near her so that she can donate her now unused clothes to the needy. She would also prefer a website or an application that would cater all the sustainable clothes options available with all sorts of styles so that she can pick her new clothes according to her taste and aesthetics that are eco-friendly.

Task Scenario 3

Diana came across a massive sale on TikTok Shop and has eyes on certain clothes to be added into her wardrobe. However, her wardrobe is entirely stacked and barely has any space left to accommodate new clothes. So, Diana wants to let go of her clothes only if the process is easy so that she can free up space in her wardrobe.

Diana wants to know where the nearby thrift stores would be so that she could let go of her clothes that are in good condition and also make some money through that to use for her purchase later on. She also would prefer to know if the clothes that are on sale on TikTok Shop are sustainable or not but she can't seem to find any websites or applications that clarifies it.
